

CHICKEN Negative Control Sera

Technical Data Sheet

Reagent Category

CHICKEN Negative Control Sera

Reagent Format Supplied

□ 7 ml of chicken negative control sera, Ready-To-Use

PRODUCT #: NC914 (Ready-To-Use)

SOURCE: Normal Chicken Sera

PRODUCT DESCRIPTION

This normal Chicken negative control sera has no immune reactivity and it is to be applied as the negative control reagent onto the designated negative control slide (s) and in place of chicken primary antibodies. This Chicken Negative Control Sera is to be delivered onto negative control slide(s) for immunohistochemical (IHC), Immunocytochemical (ICC) staining and immunofluorescence labeling (IF).

For maximum specificity and accuracy, this chicken negative control sera is manufactured to be void of immunoglobulins and to closely equate the serum protein concentration of chicken primary antibodies employed in IHC, ICC staining and IF labeling.

PRODUCT FORMAT, DILUTION and INCUBATION TIME:

□ 7 ml of Ready-to-Use, incubate for the same length of time as chicken primary antibody.

APPLICATIONS

This normal chicken sera is intended for staining negative control slides in IHC, ICC and IF labeling procedures where chicken primary antibody is employed for staining positive control and case slide.

STORAGE CONDITIONS

Store in refrigerator at 2-8°C through the expiration time noted on the vial label.

IMPORTANT NOTE:

The interpretation of test results is the sole responsibility of the end user.
